CDRA President’s Message

The Benefits of Active Engagement with the CDRA

by Jason Haus, President

Over the last 25 years the CDRA has been the go-to organization for the Construction and Demolition recycling industry. Today, more than ever, the organization is stronger and more poised to move the industry forward with its membership on the rise and opportunities within our industry continuing to emerge. These opportunities can only be realized with the engagement of the CDRA membership and the active engagement of our industry.

If you are interested in the first-look opportunities of industry initiatives and issues, being part of a CDRA committee is the best source for this information and provides the opportunity to participate in steering the CDRA’s future initiatives. There are monthly conference calls and multiple opportunities throughout the year to meet in person as a committee member.

The CDRA will hold an in-person Board of Directors meeting in Denver Sept. 27-28 at the Rally Hotel. All CDRA members are invited to the Mile High City to participate in active committee meetings, strategic planning, and the Board of Directors Meeting. You do not need to be a Board Member to participate in this two-day event that will also include a tour of the Biochar Now facility ($50 registration fee required), as well as social events to engage with others in the industry. There is a room block set aside for CDRA attendees for this event. The CDRA Board would like to personally invite all members to attend the multi-day event.

The first day of the event in Denver will focus on our strategic plan and the Board would appreciate the membership's input on the future of the organization. This is the roadmap that the organization will follow as we continue to move the industry forward.

Also in Denver, the CDRA’s committees will meet in person to discuss the current status of initiatives that are actively being worked on as well as an open forum to discuss emerging issues. If you are interested in end markets, legislative issues, membership and marketing, the annual C&D World convention, shingle recycling and risk management, this is the ideal opportunity to participate, engage and learn from others in the industry.

Multiple new initiatives are being undertaken that may be of interest to you as a CDRA member. The Shingle Recycling Committee is excited to discuss and explore opportunities with shingle manufacturers as they have renewed initiatives on supporting the end markets for shingle materials. Drywall manufacturers are also engaging in the development of end markets for their products. These two materials

SEPARATE C&D BY SIZE & DENSITY IN ONE MACHINE

We have added a new weapon to our arsenal of screeners and separators by combining the strengths and benefits of the SUB-PAN FREE™ TAPER-SLOT® Screen with the versatility and effectiveness of our DENSE-OUT® Vibratory AIR Separator.

In-Feed

By removing the sub-pan, classified fractions discharge directly into a bunker or onto a take-away conveyor.

The SUB-PAN FREE™ is the right choice for sticky applications, eliminating material build-up, wear, and related sub-pan maintenance items.

Shingle Recycling Committee
The Latest Happenings
by Kathy Powles, Chair of the Shingle Recycling Committee

Hello all of you shingle recyclers! The insurance companies are getting excited about and interested in sending their roof damage claim jobs to reputable facilities that recycle asphalt roofing shingles. This is a big step forward in promoting our industry while increasing our States Recycling Quantities. And bravo to Allstate for its efforts. I will keep you posted on the progress.

We are starting to update the list of recyclers listed at shinglerecycling.org. We will call all listed companies to make sure they still recycle and update their information as needed. Please check out your listing and make sure it is correct. If you need to be added and/or have your information edited, please send your information to info@cdrecycling.org and make sure to reference shinglerecycling.org.

As the CDRA restarts its Shingle Recycling Committee, it is a great time for all of us shingle recyclers to work together and help each other overcome various issues. If you are interested, please send me an email at kathyP@Falcongreenresources.com with Shingle Recycling Committee in the subject line. I'd like to give a shout out to our newest member, Phil Davanzo, from Crush Crete, PA. — welcome.

Besides serving as Chair of the CDRA’s Shingle Recycling Committee and serving on the CDRA Board of Directors, Kathy Powles is President of Falcon Green Resources, Woodstock, IL.

Convention Committee
Preparing for C&D World 2022

Our Convention Committee is preparing to hit the ground running when it comes to planning C&D World 2022, taking place March 12-15 in Atlanta. Here’s a sneak peak at what you can look forward to at our annual event:

- An exhibit hall filled with information on the latest trends and technologies in construction and demolition recycling.
- Thought-provoking presentations and keynote addresses delivered by industry leaders.
- A panel of C&D World sponsors discussing current technology updates within their respected areas.
- A tour of Luck Stone, the nation’s largest family owned and operated producer of crushed stone, sand and gravel.
- And much more!

Interested in helping bring C&D World 2022 to life? Contact Bill Turley at turley@cdrecycling.org to learn how you can get involved.
In this edition, we're highlighting a few CDRA member companies participating in the End Markets Development Committee who are also actively contributing to the state of the industry through their efforts on the ground.

**Mycocycle**

Mycocycle offers a licensed process that filters out toxic chemicals from waste to create reusable byproducts. This patent-pending process uses a unique ingredient—mushrooms! Mycoremediation is a form of bioremediation in which fungi-based technology is used to decontaminate the environment. After completing the remediation, the result is a renewable byproduct that is fire and water-resistant and can be manufactured into new products. End products manufactured include everything from furniture and acoustical tiles to insulation panels and packaging. With founder and CEO Joanne Rodriguez at the helm of this exciting biotechnology, there is endless potential for its use within the industry.

**SANEXEN**

SANEXEN recently opened its first dedicated construction and demolition fines recovery plant in North America. Located in Canada, the plant can scale to process up to 150,000 tons of screenings a year. From the process emerge valuable by-products: the coarser component of the fines is mechanically screened to obtain aggregate materials for road applications; the lighter component and wood residues are available for high BTU applications; and the ultra-fine component of the fines including a large gypsum content is biologically treated into compost. Beyond these applications, SANEXEN is working on the next step in end market development by turning these byproducts into high-grade construction products that can be reintegrated into future projects.

**USA Gypsum**

Led by Terry Weaver, this Pennsylvania-based company was built on a business model that emphasized end markets. Formed in 1998, it originally served as the drywall recycling arm by using leftover drywall from Weaver’s construction company projects and converting it into usable gypsum soil amendment for his farms. When Weaver shifted to managing USA Gypsum full-time, his network of agricultural outlets made up the foundation of the business. However, between being able to serve niche customer requests and being ready to engage new outlets, that base expanded to include gypsum manufacturers, production of Portland cement, and even environmental reclamation. A focus on end market development is one of the aspects of USA Gypsum that has allowed it to thrive as a standalone gypsum recycler and continue to move the industry forward on this front.

We enjoy hearing from all these companies and having the opportunity to discuss their processes. We thank them for being a part of the End Markets Development Committee and for all the work they do within the industry!

Besides serving as Co-Chairs of the End Markets Development Committee, Bernie Laber is Executive Project Manager of Revolution Recovery, and John Thomas is President of R&B Debris.
As chairs of the Membership/Marketing Committee, one of our primary tasks is membership growth. We’re pleased with 2021 YTD results thus far, as we have already met or exceeded our numerical and financial goals for membership—considered ‘stretch’ goals back when we first set them. This is only possible through the hard work, creativity and conviction of the entire Board, its leadership, the committee, key volunteers, Bosston and our media partner, GIE, toward our common goals. We appreciate everyone’s efforts ‘telling the CDRA story’ to others. The current membership year closes Sept. 30, so we are not slowing down. If you know anyone who would benefit from the CDRA, please help them find us—they’ll appreciate you for it!

Engagement...

Many of us were back in Las Vegas at the end of June, where we were able to meet in person at Waste Expo and later in the week at our summer board meeting. If you didn’t see or feel the influence of the CDRA and its members, you weren’t paying attention. Each day, there were members walking the floor, hosting booths, making valuable presentations, educating others, making introductions and networking, collaborating on ground-breaking projects and initiatives, solving problems, brainstorming new ideas, doing business, and generally enjoying our shared passion. And our committee and board meetings were interesting and productive, providing real value and results. In the few weeks since Las Vegas, this enthusiasm continues, with committee meetings and emails addressing and solving real problems—from legislative and regulatory dynamics, operating challenges, to new end market opportunities. It’s amazing what can happen when like-minded people COLLABORATE. INNOVATE. ADVANCE!

All of this can be rolled up under a single term—Engagement. We enjoy a high membership retention rate and believe that’s because we deliver tremendous value to those who seek it. Becoming an ‘engaged’ member is one of the best ways to get the most out of the CDRA experience.

One of the things we’re recognizing is that growing our membership and influence as an organization means recognizing that the CDRA isn’t just for recyclers or recycling. We can do a better job reaching out and inviting all stakeholders to join us in supporting our common mission:

—to promote and defend the environmentally sound recycling of the more than 500 million tons of recoverable construction and demolition (C&D) materials that are generated in the United States annually...(and to) represent a diverse group of member companies and agencies from the many C&D materials recycling disciplines and industry specialties active in the United States and other countries.

This means looking beyond the obvious to consider the entire supply chain—from the providers of raw materials, producers of building products, to the general contractors who deploy them; consumers who benefit from what’s been built, the legislators and regulators tasked with providing for and protecting us, and other groups that influence our ability to collect and convert would-be waste into useful material and valued end products. To this end, we will be reviewing membership categories and recommending adjustments to this and our marketing messages to welcome a broader member profile.

What can you do? Get engaged if you aren’t already:

1. Join a committee or just sit in on one to find out more
2. Share news from your company—for the CDRA website and its social media channels
3. Share a new idea, project, or success you’ve had that might interest/educate others
4. Come to a board meeting—they’re open to all members
5. Join us in Denver late September for the mid-year board meeting
6. If you haven’t renewed your membership yet for this year, tell us why, and help us become better.

Besides serving as Co-Chairs of the Membership/Marketing Committee, Terri Ward is VP Sales & Business Development at TORXX Kinetic Pulverizer Ltd, and Brandon Lapsys is President of Komptech Americas.
I n the good news world...

In 2019, California’s governor signed into law The California Recycling Market Development Act (AB 1583), which created the California Statewide Commission on Recycling Markets and Curbside Recycling. The Commission membership consists of broad representation from public agencies, private solid waste enterprises, and environmental organizations that have expertise in recycling. The governor followed in 2020, signing AB 2287 into law, which required the Commission “…to issue preliminary recommendations by January 1, 2021, and to issue policy recommendations and identify products that are recyclable or compostable and regularly collected in curbside recycling programs by July 1, 2021.”

CALGreen, which is the California Green Building Standards Code and part of California’s Building Standards, requires most construction and demolition projects to divert from disposal 65 percent of non-hazardous C&D debris. For those along the project chain, relying on timely and accurate reporting from C&D facilities for necessary documentation of C&D diversion is of paramount concern. According to the Commission’s report, however, “…if the project owner, contractor, or manager is to trust a CDI facility’s self-reported recovery rates, then it must be verified by the local jurisdiction. Most local jurisdictions lack the staff and expertise to facilitate a proper verification of recovery rates.” This realization led to conversations with the Recycling Certification Institute (RCI) and other subject matter experts exploring options on how to address the above concerns. The outcome from the discussions with stakeholders, the Commission’s Market Committee members, and concerns and opportunities expressed by the Commission itself led to a proposal framework that includes the following:

1. Prohibit direct haul to disposal or incineration of any commingled/mixed loads of C&D debris.
2. Mandate third-party verification of all mixed debris processing facilities; verification methodology should adhere to certification standards recognized by the organizations like the U.S. Green Building Council, and San Francisco’s Department of the Environment (e.g., Recycling Certification Institute’s CORR Protocol).
   - Give one year to register and start self-reporting to the state recognized qualified third-party verifier.
   - Give five years to get the whole state certified.
   - Certification order is based on a first come, first-served basis.
3. Establish and enforce minimum diversion/recovery requirements through CALGreen, with requirements being enforced at the point of debris generation (i.e., the construction or demolition activity/project). CalRecycle should not enforce minimum diversion rate requirements at CDI facilities. CalRecycle should issue CDI facility permits and monitor compliance with permit requirements.
4. Allow for third-party verified recovery rates to be certified below 65 percent, so long as the rate has been verified (with and without ADC as diversion) by a state-qualified third-party verifier.
5. Mandate and incentivize training for contractors who self-haul on C&D requirements and best practices.

There are possible exemptions and waivers described in the proposal, which are intended to address Low Population, Low Population Density Communities, and significant distances from operational C&D facilities. The final report was completed June 25, 2021, and can be accessed here by online readers. The proposal is “Policy 21-27: Recovering Resources from Mixed C&D Debris” and can be found on page 151 of the report.

Stephen M Bantillo is Executive Director of the Recycling Certification Institute and can be reached at info@recyclingcertification.org.
What Is Your C&D Facility’s Recycling Rate?
The Recycling Certification Institute has launched its online version of the Certification of Recycling Rates (CORR) program. This program provides credible, ISO-level third-party certification of C&D facilities’ true recycling rates.

Can You Prove It?
CORR is the only program that provides a credible, third-party look at the true recycling rates. It is the only program recognized by USGBC for the new extra point under LEED for using a certified recycling facility.

Why Become Certified with RCI?
• Government agencies want accurate reporting of C&D recycling rates from facilities
• Many green building programs require recycling of C&D materials
• LEED specifies use of CORR to gain an extra point for your clients
• Verify your facility’s performance and have your recycling rate published with RCI
• Give your facility a marketing edge over the non-certified facilities

CORR is administered by the Recycling Certification Institute. For more information, including scheduling a recycling rate certification or to register your facility with the Institute, go to www.recyclingcertification.org

Contact: Recycling Certification Institute

WHO ARE WE?
Since Falcon opened its doors in 1997, they have strived to keep the waste out of waste. Keeping America Beautiful. Falcon recognizes the versatility within the components of asphalt roofing shingles. Falcon’s efforts are to eliminate those shingles from entering the landfill and to get as much use out of asphalt, a limited natural resource, as possible. Falcon works hard to create a viable, quality product from shingles. Falcon is not just a recycler, they became a manufacturer of a marketable eco-friendly product.

1999: Falcon recycled Manufactured Asphalt Shingles for the 1st time.

2013: Falcon opened their 1st Tear-Off Shingle Recycling facility.

2021: Falcon continues to perfect many facets that go into creating a quality RAS product.

Legislative and Regulatory Committee
Monitoring Current Issues

by Richard Ludt, Legislative Committee Chair

The Legislative Committee is pleased to report that we continue to have excellent attendance on our calls, and we would like to invite anyone interested to join in at any time.

On our last call the committee continued to discuss the Environmental Justice issue, as well as the Social Justice issue. We are moving forward with a “Task Force” to address these matters - Thank you to those who have signed up. Should anybody else be interested in becoming a part of this task force, please let us know and we will put you in touch with Caitlyn McKissick, who is taking point.

We continue to assess both the New Jersey and Illinois C&D fines regulations but have not learned anything new since my last report. California is still dealing with the issue of banning treated wood waste that is generated in the state from landfills. The Legislative Committee is working to stay on top of this issue, as well as the others, and will keep you informed as we learn more.

Besides serving as Chair of the CDRA Legislative Committee, Richard Ludt is Director of Environmental Affairs, Interior Removal Specialists, South Gate, CA.

Risk Management Committee
Looking Forward

by Becky Caldwell, Chair of the Risk Management Committee

I am honored to serve the CDRA membership as the new Risk Management/Human Resources Committee Chair. Under John Schumacher’s leadership this committee has built a strong foundation and I welcome the opportunity to play an active part in building on those efforts.

We all recognize the importance of safety and the human element in the waste and recycling industry, in addition to managing the risks involved, daily. The CDRA Safety Awards were developed in 2018 and continue to focus on how our member’s accomplishments will benefit everyone. As we look to the next round of awards, we plan to add a new category focused on best practices for fleet operations. If you are a member and have excelled in fleet management safety, tell us your story. We all learn from each other, and we want to recognize your efforts and contributions to our industry.

Fleet safety, property risk management, and fire prevention will continue to be topics for discussion. If you, or someone on your team has ideas or practices your organization has found helpful, we encourage you to share your story. We want to recognize your efforts and contributions to our industry.

Safety is everyone’s responsibility. Please share our newsletters and include your operations team members on future webinar information so they can participate. We welcome any ideas for topics we need to address, issues you need feedback about, or practices your organization has found to be helpful.

Stay tuned for more on the new human resources component of our committee.

Besides serving as Chair of the CDRA’s Risk Management Committee, Becky Caldwell is President of Caldwell Environmental Solutions, LLC, Nolensville, TN.
DTG Recycle provides integrated recycling services for commercial, industrial, and construction clients. We collect, transport, and process a wide variety of wastes. We also manufacture innovative products from recovered materials and provide our customers proven sustainability solutions.
