CDRA President’s Message

With Gratitude for Those who Came Before Me

by Jason Haus, President
Construction and Demolition Recycling Association (CDRA)

I have an enormous amount of gratitude and thankfulness for the past leadership and outgoing CDRA President Terry Weaver, USA Gypsum, Denver, PA, for the impact he has had during his tenure. I would also be remiss without mentioning Troy Lautenbach, Lautenbach Industries, Mount Vernon, WA, who has just fulfilled his final obligation as the Past President of the CDRA. Over the last four years I have watched while these two worked together flawlessly and have continued to move the Association forward in good and - most recently - uncharted times.

As we all know too well, every organization, whether a private company, government unit or not-for-profit association, was dealt a hand like no one has ever seen related to the COVID-19 global pandemic. I sat as a member of the Executive Committee of the CDRA during the past year and listened much, talked some and soaked up the leadership of the organization and watched how leadership is supposed to act in times of uncertainty.

Decisions were made, the mission was moved forward, progress continued, albeit maybe slower, but moving none-the-less in the direction that the Board of Directors had laid out in the strategic plan a year prior to the pandemic. The key takeaway was that the CDRA never stopped moving.

The CDRA moved forward as contracted research was still being performed for the Association by the University of Florida. Committee meetings such as End Markets, Legislative, Membership and Marketing, Convention and others continued to work during a year when a lot of businesses stood still. This constant move forward was due to the CDRA staff and the Board of Directors led by Terry Weaver.

Most notably, in March 2021, the CDRA was one of the first to emerge from the hibernation of most industry trade events. I know for me, my last trade show I attended before COVID-19 was C&D World, co-located with Con Expo in 2020. The CDRA made a bold decision to host an in-person Annual Meeting during March of this year in Austin, TX. There was a lot of discussion and deliberations, site management and preparation to safely hold the event this year, and all of the work proved successful. There were some of you we missed seeing due to limitations in travel, but know you were there in spirit. The CDRA also offered a streaming option for those who still wanted to be a part of the show from a distance. Regardless of how you participated, I hope you enjoyed the show as much as I did.

SEPARETE C&D BY SIZE & DENSITY IN ONE MACHINE

We have added a new weapon to our arsenal of screeners and separators by combining the strengths and benefits of the SUB-PAN FREE™ TAPER-SLOT® Screen with the versatility and effectiveness of our DENSE-OUT® Vibratory AIR Separator.

In-Feed

Fines
Lights
Heavies

By removing the sub-pan, classified fractions discharge directly into a bunker or onto a take-away conveyor.

The SUB-PAN FREE™ is the right choice for sticky applications, eliminating material build-up, wear, and related sub-pan maintenance items.

Manufacturer of custom vibratory equipment since 1972
It seems as if it was only yesterday that we wrapped up C&D World 2020 and our lives were changed forever as we dealt with the pandemic and the challenges ahead. As we moved through 2020 our focus was on how to make C&D World 2021 a reality considering travel restrictions for our attendees. Safety was our number one priority when planning the event which required us to take into consideration the guidelines for travel within the United States and how that impacted our members and attendees. Members of the Convention Committee traveled ahead of time to the venue and tour site to walk the layout and discuss the local safety protocols with staff to ensure clear communication to make our event a success.

While the safety protocols made C&D World 2021 feel a little different than past ones, it didn’t stop the attendees from being able to network and learn from each other. It also didn’t stop us from providing strong informational content, including a great economic forecast from Jason Schrenker, who answered several questions from the audience. Our End Markets Panel was strong, with Laurie Johnson of 5280 and Tim Townsend of the University of Florida presenting updates. In the afternoon, Brock Hill, Troy Lautenbach and William Turley discussed the importance of engaging and working with legislators and regulators at all levels. Afterword, Laurie Johnson described ways to gain government grants. Trey Brown, Big City Crushed Concrete, gave a talk on how to run a successful concrete recycling operation, while Kathy Powles, Falcon Green Resources, showed off a new product made from recycled asphalt shingles.

In addition to a successful fundraiser, attendees were able to tour Recon, a mixed C&D and concrete recycling operation near the Austin Airport. Participants were given close access to the equipment to see how this interesting facility operates.

We would like to thank all our attendees, members, sponsors, speakers, and exhibitors who attended C&D World 2021 and helped make it a successful in-person event! We look forward to seeing you all at C&D World 2022 in Atlanta, where we will be touring Luck Stone’s Mixed C&D and concrete recycling operations. We are now in the process of developing the program for that event, and if you have any topic ideas, we would be glad to hear them. Better yet, join the Convention Committee as we could always use your input. If interested, contact William Turley at turley@cdrecycling.org.

Besides serving as Convention Committee Chair and a member of the CDRA Board of Directors, Paul Kuhar is Vice President of Champion Waste & Recycling, Dallas, TX.
End Markets Development Committee
Final Phase of C&D Fines and Biochar Research

by Bernie Laber & John Thomas, Co-Chairs of the End Markets Development Committee
Construction and Demolition Recycling Association (CDRA)

In this edition, we will do a deep dive into the final phase of the CDRA funded research in partnership with the University of Florida on the impact of wood-derived biochar with C&D fines in a landfill setting. The end result of the study is developing a landfill Alternate Daily Cover (ADC) composed of C&D fines amended with wood-derived biochar. The reason for the amendment is to mitigate the quantity of hydrogen sulfide gas that is generated in part from gypsum drywall present in the C&D waste stream and screenings. In the third and final phase of the study, a field-scale experimental plot has been constructed using C&D fines as a cover material with different amounts of biochar amendment. The pilot study is being conducted at the Sarasota’s Central County Solid Waste Disposal Complex.

A few interesting observations have arisen in the course of the study leading to how this final phase was designed. They relate to our understanding of how the production of hydrogen sulfide occurs. While gypsum drywall has taken the brunt of the blame for increased hydrogen sulfide when sent to a landfill, the data in this study suggests that its influence may be overstated. While the addition of gypsum to a certain point did increase the amount of hydrogen sulfide, more gypsum beyond that did not show to increase the production of hydrogen sulfide more. Initial theories here suggest that the level of moisture in the setting as well as the amount of organics (such as wood) could have as much an impact on the production of hydrogen sulfide as the amount of gypsum in the material. This is an important distinction that may spark renewed discussion on this topic as municipalities attempt to solve their landfill’s hydrogen sulfide problems by limiting the acceptance of C&D fines and gypsum drywall.

Additionally, the data suggests that C&D fines production of hydrogen sulfide mainly occurs in anaerobic conditions. Therefore, the field-scale experimental plot was constructed with layers of C&D fines buried under other layers of cover. Hydrogen sulfide sampling will be performed using a soil vapor probe inserted at the center of each plot. Samples will be collected beginning every week after construction, and then periodically after that depending on the findings. While the positive impact of biochar as a remediation for C&D fines in amending hydrogen sulfide has been demonstrated in the proof of concept and throughout the course of this study, this final phase will help inform the question of how long that remediation persists. This CDRA funded research is paving the way for further exploration of meaningfully relevant topics to C&D industry end markets development, and we look forward to continuing to share it with our membership as it unfolds.

Besides serving as Co-Chairs of the End Markets Development Committee, Bernie Laber is Executive Project Manager of Revolution Recovery, and John Thomas is President of R&B Debris.
Cdra CDRA member R&B Debris has once again agreed to offer a $1,000 cash prize to the company that recruits the most new members by the time of the next C&D World annual convention! Thanks to R&B Debris President John Thomas for championing this concept and for his continued support of the association. In addition, John is interested in seeing other members challenge their staff to encourage CDRA membership.

With this in mind, we encourage you to invite your colleagues to join and to get involved with the CDRA! Our staff is working to make it easier to get credit for your recruiting efforts. First, a “referred by” line has been added to the 2021 and 2022 membership applications. Second, you are welcome to email our Membership Department at info@cdrecycling.org with your referrals. Whether you have already recruited a new member, or you just want to pass a name along to us, we will be happy to track your progress and notify you in 2022 if you have won! Want to make this even more exciting? Make plans to join us in Atlanta next March for C&D World 2022, when the winner will be announced. Convention Chair Paul Kuhar will provide more information soon regarding our Atlanta conference.

We will support your recruitment efforts in the coming months with a series of email, print and social media campaigns. We also plan to hold business meetings and have a presence on the floor at Waste Expo® in Las Vegas, NV in late June! Come by and see us or refer a friend! We will be ready to share information on the latest CDRA projects with them. And just a reminder that all CDRA business meetings, including the Board and committee meetings planned for Waste Expo®, are open to all members. Take a break from the Las Vegas heat and join us for any of our business meetings on July 1. Contact Director of Operations Peter Doherty at doherty@cdrecycling.org for more information.

When speaking with non-member colleagues about the CDRA, we are often asked “What’s in it for me and my business?” This is a question that is easy to answer. The CDRA provides a wealth of information and research for those interested in the C&D industry. And the association also makes it possible for colleagues from all over North America and beyond to connect and work together in a supportive environment that helps to grow and improve the industry for the thousands of companies who rely on its success! We also fight for the industry, and share experiences and explore solutions to thorny problems. Joining the CDRA makes good business sense, whether you are a recycler, general contractor, service provider, user of end markets products, or a local or state government agency.

Speaking of working together and sharing experiences, have you ever thought about joining a CDRA committee? The CDRA is in search of new committee members for our committees during the 2021—2022 leadership year. It is easy to get started, your commitment typically only requires a few hours per month, and CDRA staff are ready to answer your questions. We look forward to speaking with you about the Convention Committee, End Markets Committee, Legislative Committee, Safety and Risk Management Committee, Shingle Recycling Committee, or even the Marketing and Membership Committee! We are especially interested in speaking with our recycler colleagues, but personnel from all member companies are invited to take part. The 2021-2022 leadership year ends in March 2022. Since the leadership year has already begun, we encourage you to hurry and get involved! Please call 866-758-4721 or send an email to info@cdrecycling.org for more information.

Related to our Shingle Recycling Committee, we are pleased to announce that the www.shinglerecycling.org website has recently been updated and now includes more than 70 new files and resources! We have also updated many of the pages. The CDRA is committed to engaging those with an interest in shingle recycling.

See you in the next issue! C&D

Besides serving as Co-Chairs of the Marketing and Membership Committee, Terri Ward is VP Sales & Business Development at TORXX Kinetic Pulverizer Ltd, and Brandon Lapsys is President of Komptech Americas.
Shingle Recycling Committee
We’re Back!

by Kathy Powles, Chair of the Shingle Recycling Committee
Construction and Demolition Recycling Association (CDRA)

Wake up AND read! While a lot of us have been “quarantined” and gaining weight, GAF, the largest shingle manufacturer in the U.S., has been hard at work developing a way to recycle waste shingles into new shingles. The company, which is a CDRA member, recently announced a financial commitment of more than $100 million toward their recycling efforts, creating a full-circle process. Bravo to GAF!

In addition, a longtime advocate of shingle recycling, the Illinois State Highway Toll Authority (ISHTA) has begun the use of rejuvenators (such as RelixER) as an additive when using oxidized asphalt ingredients, RAS/RAP, in hot mix asphalt (HMA). The rejuvenator softens the hardened asphalt, reactivating the extreme stickiness of the bitumen. When used properly, this rejuvenating additive can eliminate the issues once realized with using RAS alone, re-igniting the market for RAS in HMA.

If any of you shingle recyclers have been struggling, the wait could soon be over, though not immediately. These two newly developed processes are not going to reap rewards overnight. I predict we will see results no sooner than in three years. If we all band together by promoting and educating pavement purchasers, then perhaps, in a couple months we will all see an uptick in the RAS sales. Hang in there, we all know it’s a non-renewable natural resource — something worth recycling!

Openings available! Join the Shingle Recycling Committee to be in the know about asphalt roofing shingle recycling. Discuss processing, environmental impacts, dealing with customers, etc. The ultimate goal is to improve your company’s bottom line. Let’s band together and put a big recycling bite into the 12 million tons of shingles entering our landfills. If interested, call CDRA Executive Director William Turley at 630-258-9047 or email info@cdrecycling.org for more information.

Besides serving as Chair of the CDRA’s Shingle Recycling Committee and serving on the CDRA Board of Directors, Kathy Powles is President of Falcon Green Resources, Woodstock, IL.

C&D

What Is Your C&D Facility’s Recycling Rate?
The Recycling Certification Institute has launched its online version of the Certification of Recycling Rates (CORR) program. This program provides credible, ISO-level third-party certification of C&D facilities’ true recycling rates.

Can You Prove It?
CORR is the only program that provides a credible, third-party look at the true recycling rates. It is the only program recognized by USGBC for the new extra point under LEED for using a certified recycling facility.

Why Become Certified with RCI?
• Government agencies want accurate reporting of C&D recycling rates from facilities
• Many green building programs require recycling of C&D materials
• LEED specifies use of CORR to gain an extra point for your clients
• Verify your facility’s performance and have your recycling rate published with RCI
• Give your facility a marketing edge over the non-certified facilities

CORR is administered by the Recycling Certification Institute. For more information, including scheduling a recycling rate certification or to register your facility with the Institute, go to www.recyclingcertification.org

Contact: Recycling Certification Institute
PO Box 160166
Sacramento, CA 95816
916.242.8287
e-mail: info@recyclingcertification.org
website: www.recyclingcertification.org
Risk Management Committee
Thank You John Schumacher and Next Steps

Leadership within our Risk Management Committee will shift in the coming months as Chairperson John Schumacher leaves the committee to focus more on his insurance and risk management business for recycling clients. John has been an instrumental part of this committee for six years, and we are incredibly appreciative of all the good work he has done on behalf of the CDRA.

As we head toward summer, the Risk Management Committee aims to:

1. Pursue creating a safety best practices award for fleet operations.
2. Continue creating educational platforms focused on fire prevention, fleet safety and property risk management.
3. Continue pursuing operations and safety professional members to join the committee. Their operational insight will bring value and help guide what is offered.
4. Promote the safety awards program for members who are not participating. Many of the CDRA’s member companies could benefit significantly by evaluating and updating safety programs.
5. Inform operations-level personnel about committee offerings, including webinars, safety awards programs, and the safety manual

If you have questions or would like to get involved in the Risk Management Committee, please contact William Turley at turley@cdrecycling.org.

WE move tons of new equipment.

Driving sales has been a hallmark of WasteExpo for 50+ years.

And you’ll be happy to know that WE have reconfigured our exhibit hall to ensure your safety while you’re doing business.

So join us at the leading solid waste and recycling event in North America.

WE know it’s not business as usual. But, then again, it never has been.
The Legislative Committee is pleased to report that we have had excellent attendance on our calls, and we have seen some movement on some of our topics, though not always in the direction we had hoped.

On our last call the committee continued to discuss Environmental Justice, as well as ESG. We have established a “Task Force” so that we can get the information needed by membership to address this issue properly and fairly. Should anybody be interested in becoming part of this task force, please let us know and we will put you in touch with Caitlyn McKissick who is taking point.

The issue of HBCD insulation at MRFs is something we have been looking at for a while now. John Thomas, R&B Debris and Secretary/Treasurer of the CDRA, gave a nice synopsis on the last call and it appears that the BMPs that most facilities use for dust control will satisfy the enforcement agencies in regard to this material. We also seem to have been able to explain that this material is not actually being recovered at the MRFs for reuse, which was the original understanding of the regulatory folks.

We are still in the middle of assessing both the New Jersey and Illinois C&D fines regulations. We have learned that the New Jersey legislation seems to have originated in Washington DC and was delivered to New Jersey almost fully formed. We anticipate these regulations to start popping up in other areas, and we will keep an eye on the spread of these rules.

California is still trying to figure out what they are going to do with the treated wood waste that is generated in the state. There is still only one landfill that can accept the material, and with most C&D facilities having submitted their variances that allow them to treat this material like Universal Waste, there is no plan that we know of to actually deal with the material. In addition, Los Angeles County is in the middle of revamping their C&D ordinance and is looking at including language that states that facilities that process Unincorporated LA County C&D material must have third party verification of their diversion rates, with CORR certification or the equivalent. This would be a huge win for CDRA and RCI.

We invite anybody who would like a more robust education about current legislative activities to join us on our next call when Gary Sondermeyer will bring us up to date on the development of the New Jersey environmental justice legislation, among other topics.

Besides serving as Chair of the CDRA Legislative Committee, Richard Ludt is Director of Environmental Affairs, Interior Removal Specialists, South Gate, CA.

President’s Message (Continued from page 1)

The standard expectations of C&D World are that we will get together, learn some new insights and meet up with friends from across the country. All of this held true in CDRA fashion and it happened live in Austin. In addition, the intangibles that I also took away were the smiles on people’s faces when we had the ability to remove our masks and the kind reuniting with people who we have not seen in a year. Many of us took for granted seeing each other often at other industry events, and I am now convinced that we will be thankful for each time we have the opportunity to see each other in person. We had the ability to eliminate Zoom calls, for at least the few days we were there, and for that I was grateful. I left Austin after a great tour of Recon Services along with the gracious hospitality of Walter and Ross Biel and their award-winning barbeque reenergized in an industry that has a lot of promise and opportunity.

The leadership that you have trusted in the past to lead this organization has done you well, and it is my hope that I can follow in their footsteps over the next two years in similar fashion and continue to promote our industry in the best possible way.

I appreciate all the work of the Staff, Board of Directors, Committee Members and Association Members. It takes all of us working together to continue to move our Association and our businesses forward and as we emerge from the pandemic and COVID-19 soon becomes a thing of the past. I wish all of you the best of luck in the upcoming year and I will do my best to follow in the footsteps of those before me to continue to work toward a stronger Association that works for you.

Besides serving as President of the CDRA, Mr. Haus is CEO of Dem-Con Companies, Shakopee, MN.
